

DOWL HKM's structural design results in high quality conventional and specialty structures, new or refurbished, of any material. Computer modeling, CADD systems, and broad experience enable our structural engineers to manage large projects, complex loads, and difficult sites. We have completed a wide range of projects for public and private clients, including commercial, institutional, and mixed-use developments. Construction-phase services, including observation and construction materials testing, help ensure final built quality for your project.

STRUCTURAL ENGINEERING

SERVICES PROVIDED:

Buildings

Hydraulic Structures

Bridges

Stadiums

Foundations and Pilings

Equipment Supports

Underpasses/Interchanges

Retaining Walls

Platforms/Catwalks

Crane Systems

Seismic Analysis

Special Structures
